

# PROGRESS REPORT

Laura Rothgeb

July 9, 2012

# Last Week

- Encountered issue with HV and buzzing bases (resolved itself apparently)
- Tried to move on to triple coincidences, but there were not enough “good” PMTs
- Glued and wrapped two more scintillators and PMTs (multiple times)

# This Week

- Currently working to find coincidences with one of the newly wrapped PMTs and one of the old “good” ones
- Will be taking the prototype to JLab to begin testing (possibly with scintillator instead of/in addition to aerogel)
